

AQUO

A unique refill system – practical and healthy for both the economy and the environment.

AQUO refill system is a new smart, efficient and high-tech cleaning concept that includes four daily cleaning products, packaged in practical and ergonomic trigger spray bottles with associated super-concentrated refill ampoules.

Spray - let work - wipe off. When the bottle is empty, it is charged with a refill capsule and filled up with tap water and is shortly afterwards ready for use again. Lower cost - less packaging waste - less transport and space!

Can it get better and smoother? We do not believe that.
