

# Klarglas

What is the KlarGlas system?

## What types of scratches can be removed?

- deep scratches (vandalism)
- minor scratches
- corrosion
- mechanical damage
- wear 'n tear and environmental damage

## How does it work?

During the process, a minimum of material is removed by grinding. The damaged area must be ground down so that the lowest point of the scratch or damaged is exposed. By using finer and finer grain sizes, transparency is restored, and buffing the area burnishes it again.

**KlarGlas**

## Advantages of the KlarGlas system

- The process does not disrupt normal operations
- Quick reaction time
- No significant optical deterioration
- Grinding and buffing in mounted condition
- Prevents further cracking around the scratch
- Environmentally friendly solution
- Considerably cheaper than a new windscreen
- No installation costs  
(no dismounting and mounting)
- Numerous references
- Dry process
- Happy customers

## KlarGlas system kit box standard equipment

- Makita buffing machine
- Grinding plate (75 mm, 115 mm, 150 mm, 200 mm)
- Colour-coded grinding discs (75 mm, 115 mm, 150 mm, 200 mm)
- Buffing disc
- Spacer for inaccessible spots
- Marker
- Infrared thermometer
- Buff
- Cleaning fluid
- Spray bottle (cleaning fluid)
- Spray bottle (buff)
- File
- Steel brush
- Breathing protection
- User handbook
