

NATURACOAT SC 20

Total protection against graffiti and environmental pollution

Graffiti tags are a global problem and can be extremely costly to sanitize. Unfortunately, some older buildings are permanently damaged.

But there are products for protection against graffiti and environmental pollution. **Naturacoat SC 20** offers complete surface protection against permanent damage caused by graffiti and pollution; like smog.

Naturacoat SC 20 is a natural product made of vegetable polysaccharides and water. It is sprayed onto the object, leaving a thin – basically invisible coating – at the same time lets the object breathe naturally.

To remove graffiti or impurities from the coated surface, it is simply washed with high pressure hot water spray at 60-70 ° C.

Protects all types of materials

- Natural stone
- Brickwork
- Concrete
- Plastic
- Ceramics

Other product information

- Made with natural ingredients
- Environmental adopted
- Graffiti and environmental pollutants can be sprayed of the coated surface together with coating with 60-70 °C hot water.
- Virtually invisible after treatment

BASED ON RENEWABLE RAW MATERIALS.

More than 400% less fossil content than traditional wax-based graffiti protection.

MORE THAN 99% VOC FREE

FREE FROM MICROPLASTICS

MEETS THE FOLLOWING STANDARDS:

SS-EN 13 581:2002

Impact on the frost resistance of concrete

SS-EN 13 579:2002

Impact on the drying out of concrete
